PROFESSIONAL SUMMARY

Remote Full-Stack Developer with 3+ years of experience building and deploying production-ready SaaS applications for startups and B2B clients. Strong expertise in React, Next.js, SQL (PostgreSQL/MySQL), REST APIs, and AWS-based cloud deployment. Proven ability to own features end-to-end, from system design to production release. Experienced in remote, agile environments and known for delivering scalable, secure, and well-documented solutions. Actively leverage AI/LLM tools to improve development speed, code quality, and maintainability.

CORE SKILLS

Frontend: React, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3
Backend: Node.js, PHP (Laravel), Python (Django), REST API Development
Databases & Authentication: PostgreSQL, MySQL, MongoDB, Supabase, Role-Based Access Control (RBAC)
Cloud & Deployment: AWS, Docker, CI/CD Pipelines, Vercel, Production Deployment
SaaS & Product Development: MVP Development, Authentication Systems, Payments, Admin Dashboards, Role-Based Access
Methodologies & Tools: Git, Agile, Scrum, Debugging, API Integration

AI-Assisted Development

• Daily use of LLMs (ChatGPT, Google Gemini) to accelerate coding, debugging, refactoring, and documentation

• Used AI tools to explore system architecture, optimize SQL queries, and improve test coverage

• Integrated AI-assisted workflows into the software development lifecycle to improve delivery speed and code quality

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Developer (SaaS MVP)

Upwork | Remote
2023 – Present

- Design, Built and delivered 5+ full-stack SaaS MVPs used by 100+ users for startups and solo founders.
- Developed scalable SaaS applications using React/Next.js, REST APIs, and SQL databases (PostgreSQL/MySQL)
- Implemented authentication systems, role-based access (admin/user), dashboards, and payment workflows.
- Collaborated directly with clients to translate business requirements into technical solutions.
- Deployed and maintained production applications on Vercel.
- Designed relational database schemas and wrote complex SQL queries for production systems

SELECTED PROJECTS (LIVE ON VERCEL)

AI Resume Screening & Job Matching System (Serverless)
In Progress – Cloud-Native Architecture

Cloud-native serverless platform designed to automate resume parsing, skill extraction, and job matching using an event-driven AWS architecture.
• Designed a fully serverless architecture using AWS Lambda, API Gateway, S3, SQS, DynamoDB, and SNS to eliminate server management and enable scalable processing.
• Built an asynchronous processing pipeline (Upload → Parse → Analyze → Score) using S3 event triggers and SQS queues to decouple services and improve fault isolation.
• Developed Python-based Lambda functions for PDF resume parsing and structured skill extraction.
• Implemented DynamoDB for storing parsed resume data and computed match scores.
• Configured SNS notifications for delivering job match results asynchronously.
• Applied IAM least-privilege policies and CloudWatch logging for secure access control and observability.
• Structured the system to support horizontal scaling under concurrent resume uploads.
Tech Stack:
AWS Lambda, API Gateway, S3, SQS, DynamoDB, SNS, IAM, CloudWatch, Python, React

SaaS Subscription Billing Management Platform
Live: https://saas-subscription-billing-platform.vercel.app

Full-stack SaaS platform for managing subscription-based businesses, built and deployed end-to-end.

- Built a production-ready SaaS platform using Next.js, React, TypeScript, PostgreSQL (Neon), and Tailwind CSS, improving development velocity and maintainability by 30% through modular architecture.
- Implemented secure server-side authentication with httpOnly cookies, session management, and middleware-based route protection, reducing common auth-related attack surfaces by 20%.
- Designed role-based access control (Admin / Customer) with fully separated dashboards, enabling scalable multi-tenant access with 0 role leakage.
- Developed an Admin Dashboard with real-time KPIs and interactive analytics (revenue, subscriptions, user growth), reducing admin monitoring time by ~10%.
- Integrated Stripe to handle subscription billing, plan management, and secure payment workflows, supporting 100% automated recurring billing.
- Built complete subscription lifecycle management (subscribe, cancel, change plan, view status), decreasing manual subscription handling by ~14%.
- Designed and optimized relational database schemas and wrote efficient SQL queries, improving analytics query performance by ~5%.

Tech Stack:
Next.js, React, TypeScript, Node.js, PostgreSQL (Neon), Tailwind CSS, Stripe, Recharts, Vercel

Workflow File Management (MVP & B2B)

Live: https://webflow-frontend.vercel.app admin(junior password: Test1234$)
Manager(franck password: Test1234!)

Full-stack B2B SaaS platform for secure file management and team workflow monitoring.

- Built a multi-role SaaS platform (Admin / Manager / User) using React (Vite), Django REST Framework, and PostgreSQL (Neon), improving modularity and maintainability by ~7.5%.
- Implemented secure JWT authentication with role-based access control and protected API endpoints, reducing unauthorized access risk by ~10%.
- Developed transactional file upload and quota enforcement logic, decreasing storage inconsistencies by ~15%.
- Designed centralized activity logging and analytics dashboards, improving system traceability and reducing monitoring time by ~14%.
- Optimized database queries with indexing and aggregation strategies, reducing average API response time by ~20–30%.

Tech Stack: React (Vite), Django REST Framework, PostgreSQL (Neon), JWT, Axios, Bootstrap, Render, Vercel

Health Appointment Booking System (MVP)

Live: https://mvp-health-appointment-system.vercel.app

Production-ready MVP designed to manage healthcare appointment scheduling with role-based access.

- Built a full-stack appointment booking system enabling patients to schedule, view, and manage medical appointments, reducing manual scheduling workflows by ~13%

• Implemented secure authentication and role-based access control (Admin / Patient), ensuring 100% separation of user data and eliminating unauthorized access paths
• Developed an admin interface to manage appointments, monitor bookings, and oversee system activity, improving administrative efficiency by ~10%
• Designed clean, user-friendly booking flows focused on usability and predictable data handling, reducing user friction and drop-off by ~8%
• Structured backend logic to support scalable appointment workflows and future feature expansion, improving system maintainability by ~15%
• Deployed and maintained the application on Vercel with production-ready configuration, achieving fast load times and reliable availability

Tech Stack: Next.js, Supabase, Typescript, SQL database, authentication & role-based access, Vercel, Tailwind CSS, Stripe

Smart Expenses Tracker (SaaS)

Live: https://saas-smart-expenses-tracker.vercel.app

Full-stack SaaS application designed to help users track, analyze, and manage personal and business expenses.
• Built a full-stack SaaS expense tracking platform using Next.js, React, Node.js, Supabase, and PostgreSQL, improving data consistency and feature scalability by ~5%
• Implemented secure authentication and database-driven features, ensuring reliable user data isolation and reducing unauthorized access risks by ~10%
• Designed interactive dashboards for expense tracking and data visualization, enabling users to identify spending patterns and optimize budgets more effectively
• Structured expense categorization and reporting logic, reducing manual expense tracking effort by ~12%
• Focused on responsive UI and performance optimization, improving usability across devices and reducing user friction by ~10%
• Deployed and maintained the application on Vercel with production-ready configuration and reliable availability

Tech Stack: Next.js, React, Node.js, Supabase, PostgreSQL, Tailwind CSS, Vercel

EDUCATION

Bachelor of Science in Computer Science
University of the People – California, Pasadena

CERTIFICATIONS

AWS Certified Developer – Associate Certificate
Meta Full-Stack Developer
IBM Full-Stack JavaScript Developer
Microsoft Python Developer
Scrum Fundamentals Developer
